**Amendment to the Abstract**

Please amend the abstract to the following:

~~The object of the invention is to provide an automatic shift type manual transmission in which structural complications can be avoided and downsizing can be attained.~~

An automatic shift type manual transmission is provided in the invention. An ~~[[The]]~~ automatic shift ~~[[type]]~~ manual transmission equipped with a forward shifter to perform ~~for~~ forward stage shifting, a reverse shifter ~~4 to perform for~~ reverse stage shifting, an actuator rod ~~[[3]]~~ carrying the forward shifter and the reverse shifter ~~[[4]]~~, and an actuator to operate the actuator rod according to ~~[[the]] shift operation~~ operations of ~~[[the]] a~~ shift lever, wherein ~~[[the]] a~~ shifter length of the reverse shifter is set to be substantially the same as the that of the forward shifter, and ~~[[the]] a~~ reverse stage shift stroke measurement is set to be comparatively larger ~~greater~~ than ~~[[the]] a~~ forward stage shift stroke measurement by the difference in ~~[[the]] an~~ operating measurement of the actuator rod.
